

Q2 2026 · JULY 2026

What's new in Nvolve

Fourteen updates across the platform — from certificate branding to mobile checklists. All available in your account from 6 July 2026.

GENERAL AVAILABILITY

New this quarter

CONFIGURABLE CERTIFICATES

Your brand on every certificate you issue

Certificates now carry your logo at the top, with Nvolve sitting quietly as a "powered by" mark underneath. You can also choose your own signatory, so the name on every certificate reflects your organisation. The default signatory has been updated to align with current account settings — your Customer Success Manager can walk you through any changes.

GENERAL AVAILABILITY

Available to all customers
No configuration required
Live from 6 July 2026

INTERFACE AND USABILITY

Changes you will notice

Configurable Expiry Period

Expiry can now be set to any number of months or years, replacing fixed preset values. The dropdown shows Months and Years as options, giving full control over training renewal cycles.

Procedure Title Always Visible

When creating or editing Digital Procedures, the procedure title now remains visible throughout. Previously it disappeared in certain views during authoring.

Language Preference Retained

The platform now carries the chosen language across sessions. For frontline workers operating in a language other than English, the language no longer resets on each login.

Third Signature Improvement

Usability improvements to the three-party sign-off workflow for customers who require countersign on training records.

Sorting in Course Scheduler The Attendance and Group Update tab now includes a sort function. Admins can sort the employee list and mark attendance far more efficiently, particularly for larger sessions.	Manager Filter on Grace Period and On Hold Reports Admin users can now filter Grace Period and On Hold reports by manager, in addition to the existing workgroup filter.
Training Reason on Group Update When performing a group training update, admins can now set a training reason — such as a complaint or corrective action — keeping the audit trail consistent for bulk events.	Unique Employee ID Now Required The Unique Identifier field is now mandatory when adding an employee individually, bringing it in line with bulk import. Each ID is unique across the group. The UID prevents duplicate profiles and ensures training records attach to the right person. Worth capturing at onboarding to get the full benefit from day one.

Enhancements and fixes

Configurable Compliance Definition Site admins can now configure what status counts as compliant within their sites, replacing the single platform-wide setting. We will be making necessary changes to Group level in upcoming releases.	BRCGS Issue 7 Templates in Audit Module The BRCGS Global Standard for Packaging Materials Issue 7 template is now available within the Audit module, addressing a gap for customers in the packaging supply chain.
Password Reset and Self-Serve Invite Flow Security and self-serve improvements to the password reset and new user invite process, reducing support overhead and improving the onboarding experience.	Audit History: Who Made Changes The archived employee record now shows who made the change, making this self-serve for admins and reducing related support requests.
Group Sign-Off and Multiple Certificates The group sign-off flow now supports multiple certificates issued at the point of sign-off, reducing manual effort for facilitators completing classroom sessions.	Recurring Audits This feature allows admins to set a frequency for recurring audits including options for daily, weekly, monthly etc rather than scheduling each audit instance manually.

Notifications: Clear Individual or All Items

Clicking a single notification marks only that item as read. Mark all as read clears everything at once.

Future Completion Dates Blocked

The platform now prevents future dates in completion date fields, removing a common source of data quality issues.

Partial Questionnaires: Updated Workflow

The workflow for partial questionnaire completion has been updated to clarify expected behaviour and reduce support queries.

ALL UPDATES LIVE IN YOUR ACCOUNT

Log in to see the changes for yourself

Every update listed here is available across all accounts from 6 July. Your Customer Success Manager is on hand if you would like a walkthrough of any new feature.
