

What's new in Q1 2026

New features and improvements now live in your account.

Hi there,

Here's a summary of everything we've shipped this quarter. All updates are live in your account. Reach out to your Customer Success Manager if you'd like a walkthrough of anything below.

NEW FEATURES

ELEARNING

Multi-module courses: group SCORM files under a single course

Many eLearning providers, including Train4Academy and iHasco, now deliver training as multiple SCORM files. You can now group these under one parent course, making it far easier to manage modular programmes and track learner progress in one place.

- Create a parent course and attach any number of child modules beneath it
- Assign at parent level and employees automatically receive all modules
- Existing single-module courses are completely unaffected

Tiered notifications, deep links & delivery dashboard

You can now choose how urgently a message is delivered. Three priority levels give you control over how notifications reach your people, from a standard in-app alert to a push notification that lands immediately on the device.

Normal Standard in-app notification 	Important In-app + email notification  	Critical Push + email + in-app   
--	---	---

The notification bell is your personal update hub. It now surfaces everything assigned or relevant to you, including training, surveys, news, and more, all in one place. Notifications link directly to the relevant content so you can act immediately. This will continue to grow as more modules are connected over time.

PLEASE NOTE: COMMUNICATIONS MODULE

In this release, the Notification Hub is exclusively available to customers with the Communications module. Notifications for learning, training, and other modules are not triggered in this release — these enhancements are planned for future releases.

BEFORE YOU SEND

Before a notification is sent, Nvolve now shows you exactly who will receive it and flags any employees who may be missed based on the notification type you selected. This means no more sending blind.

Total employees

in scope

Can receive

confirmed reachable

No email

flagged, view list

If some employees cannot be reached, you can view who they are and choose whether to proceed. This helps you maintain data quality and ensure the people who matter most are always reachable.

- Group-level triggers let you send notifications based on group membership or activity
- A new delivery status dashboard shows sent, delivered, and read rates
- Auto-sync on login so employees always see the latest notifications

PERFORMANCE

Performance module enhancements

A range of improvements to the performance review module giving you more structure, flexibility, and control over how reviews are configured and completed.

- Structured sections for grouping statements and scoring, with headings, subheadings, and paragraphs for improved reporting clarity
- Employee-only performance reviews now supported
- Template-level signature settings, including control over whether managers can edit employee review data

Lock workgroups at group level

Prevent site-level changes to mandatory training assignments by locking workgroups so they can only be managed from group level.

Switch sites on tablet without signing out

Tablet users can now switch between sites directly, with no need to sign out and back in.

Marketplace licences at division level

Manage and assign marketplace licences at division level for organisations with complex structures.

AI course duplication

Duplicate an existing AI-generated course as a starting point, saving time when building similar programmes.

IMPROVEMENTS

Training type visible in reports: filter by SOP, eLearning and more

The Manager Matrix and other reports now show what type of training each item is, with filtering by type. No more identical course names with no way to tell them apart during an audit.

Alphabetical filtering and search across all reports

All reports now support alphabetical filtering and search, making it faster to find specific employees or training items.

Document owner notified when approval is complete

When all approvers have reviewed a document, the document owner is now automatically notified. No more manually chasing approvals.

Future completion dates are now blocked

It's no longer possible to set a completion date in the future, preventing data entry errors that can affect compliance records.

Archive employees with a reason

When archiving an employee you can now add a comment explaining why, making records easier to review and reducing back-and-forth with support.

Employees can refresh training on the tablet

When the "Allow employee to refresh training" site setting is on, employees can now refresh training directly from the tablet app.

Mandatory fields clearly indicated when creating procedures

Required fields when creating an SOP or procedure now display a clear indicator, reducing incomplete submissions.

Password & security improvements

Password encryption strengthened across the platform. Force password reset now defaults to your site setting when generating a new password.

All updates are live in your account. Want a walkthrough of any new feature? Your Customer Success Manager is here to help.
